PROFESSIONAL SUMMARY

Computer Science graduate and part-time MBA candidate targeting a technology graduate programme focused on AI and data engineering, with fintech engineering experience and hands-on experience building and operating production AI systems powered by the latest AI agentic skillset, while integrating emerging AI capabilities into day-to-day development practice.

EDUCATION

Bachelor of Computer Science (Honours),

Universiti Sains Malaysia

Location: Gelugor, Penang

Dates: Oct 2021 - Oct 2025

CGPA 3.48 (Second Class Upper) | Dean's List - 3 consecutive semesters

Master of Business Administration (Online Learning),

INTI International University

Location: Nilai, Kuala Lumpur

Dates: June 2026 - Present

CGPA 3.67 (First-Class Honors)

Physics, Chemistry, Computer Science,

Kedah Matriculation College

Location: Changlun, Kedah

Dates: Jan 2020 - Apr 2021

CGPA 3.92 (First-Class Honors)

SKILLS

Data & Delivery: Requirements Gathering & Analysis, Change Request Management, UAT, Agile Sprints, SQL Query, Query Optimization, ETL, Batch Processing, Spring Batch Pipelines

Programming Languages: SQL, Python, Java

Cloud & Engineering Tools: Azure VM, Azure Key Vault, AWS EC2, AWS S3, AWS CloudFront, AWS IAM, GCP Compute Engine, GCP OAuth 2.0 & APIs, Oracle DB, SQLite, Supabase, CI/CD, Git, GitLab, Jenkins, GitHub Actions, APScheduler, Vercel Cron Jobs, FastAPI, REST API, Postman, Playwright, Next.js

AI Technologies: Agentic Workflows, Agent Memory (Obsidian), Agent Harness, Agent Skills & Plugin, MCP, Tool Use, Prompt Engineering, Context Engineering, Multi-Agent Workflow, RAG, Embeddings, Chunking, Hybrid Retrieval, Pinecone, LangGraph, LangChain

Spoken Languages: Mandarin (Native), English, Malay

WORK EXPERIENCE

Software Engineer Intern (Data Automation)

iFAST Capital Sdn Bhd

Location: Bukit Bintang, Kuala Lumpur

Dates: March 2024 - August 2024

- Architected and implemented a Spring Batch compliance pipeline, designing the job flow and processing patterns to process client account records against complex passport-expiry constraints. Automated transaction restrictions, audit trails and six rule-triggered email notification types, while optimizing the processing workflow through bulk operations and avoiding hard-coded logic.
- Translated an investor-classification requirement into an end-to-end system enhancement, mapping how new investor attributes should be captured, derived, persisted and reloaded across account-opening, account-update and profile-maintenance journeys.
- Collaborated with 14 developers and 4 project directors across monthly sprints, supporting CI/CD pipelines, change request management and production releases for both internal and external business-critical fintech systems.

Ski & Snowboard Technician (USA Work & Travel)

Ober Mountain

Location: Gatlinburg, Tennessee

Dates: December 2025 - May 2026

- Worked in a diverse, multicultural team representing over 10 countries, adapting to a new work environment by overcoming language barriers.
- Recognized with 2 Honorable Mentions from manager for resolving complex customer issues with technical expertise.

Founder

Yierming Production (Studio)

Location: Kuala Lumpur

Dates: May 2024 - December 2025

- Designed and launched branding and web content for an AI education startup led by a former technology company AI Director.
- Directed a four-digit budget commercial campaign for a Web3 brand (14K+ followers).
- Delivered digital marketing strategies for a 400K-follower F&B brand, driving 10K+ Shopee sales for top products.

PROJECTS

Personal Always-On AI Agent (Hermes + Real-Ming Operations Layer)

URL: <https://github.com/pmgwee/real-ming>

Technologies: Azure VM, Azure Key Vault, Hermes Agent (native Kanban/workspaces), MCP, Agent Skills, Telegram, Notion API, Google Calendar & Gmail APIs, Obsidian/LLM-Wiki, SQLite, TypeScript, Node.js

- Architected a personalized Hermes Agent with a Real-Ming control-plane integration and governance layer, preserving Hermes's native reasoning, capabilities, memory and kanban while contributing configuration, 6 agent skills and 9 MCP tools reached as agent capabilities.
- Enabled autonomous coding workflows spanning repository study, isolated workspace setup, implementation, review, testing and PR-ready delivery, with Real-Ming supplying operator preferences, rules and configuration.
- Integrated cross-source coordination over Google Calendar, Gmail and Notion through provider adapters with explicit routing across 3 Google accounts, composing two daily reports (a morning brief and an evening executive roll-up) on an always-on Azure VM.

Cross-Agent Context Engineering with Persistent Second Brain

URL: <https://github.com/pmgwee/agent-knowledge-base-codex>

Technologies: Rust, Obsidian, Hybrid RAG Retrieval, all-MiniLM-L6-v2, SQLite FTS5, Codegraph, MCP, Claude Code & Codex Lifecycle Hooks, LongMemEval, Next.js

- Engineered a transcript-native persistent memory extending the LLM-wiki pattern to consolidate evidence-cited, wikilinked memories into Obsidian, achieving zero cold-start latency on memory collection.
- Integrated Claude Code and Codex via native lifecycle hooks plus codegraph, combining BM25, vector search and graph RRF, achieving 96.0% Recall@5 and 0.922 MRR across 246,750 turns while capping session-start orientations at 1,500 tokens or fewer.
- Achieved net token savings against raw context pasting, building a Next.js console to track real-time system condition, retrieval quality, hook delivery status and deployment drift.

RAG Chatbot with Self Auto-Ingestion (INTI-MBA Chatbot)

URL: <https://github.com/pmgwee/Ai-Chatbot>

Technologies: FastAPI, LangGraph, LangChain, Hybrid RAG Retrieval, Pinecone, RapidOCR, APScheduler, AWS EC2, Next.js

- Engineered a LangGraph RAG agent implementing multi-query retrieval, LLM document grading and query-rewriting self-correction, delivering cited answers grounded to source files across 4 live Canvas LMS MBA courses.
- Automated daily ingestion with APScheduler, keeping 215+ documents and 3,800+ searchable passages continuously up to date with zero manual uploads.

Autonomous Trending News AI Agent (BersamaAi)

URL: <https://github.com/pmgwee/BersamaAi-community>

Technologies: GCP Compute Engine, Python, Agent Harness, Discord MCP, GLM-5.2, Groq Whisper ASR, yt-dlp, GitHub Actions

- Built a workflow that ingests online sources and routes each candidate through a GLM-5.2 LLM-as-a-Judge that grades relevance and classifies it into one of 9 topic channels, posting cards to Discord every 3 hours via GitHub Actions.
- Deployed an LLM-powered Discord community bot with an MCP server exposing Discord as a tool surface to AI agents, running on a GCP VM.
- Handled caption-less video via an ASR model on a daily GCP cron job that summarizes curated YouTube channel videos.

Multi-Agent Routing Orchestration Claude Skills

URL: <https://github.com/pmgwee/Multi-Agent-Autopilot>

Technologies: Agent Skills, JavaScript, Prompt Engineering, Playwright, MCP

- Architected a hands-off pipeline (kickstart, autopilot, UAT-runbook) chaining a top-tier planning model with a cheaper CLI executor model, cutting manual prompting to zero and enabling crash-safe resumption across sessions.
- Built an automated looped evaluation layer delivering Playwright screenshot evidence for a top-tier model to perform code review at each delivery phase.

AWARDS AND HONORS

- Champion - Young Entrepreneur Programme (YEP) - MyPSA - 2025
- Champion - Tech4Good SG Flagship - ICMS-GovTech - 2024
- Third Prize - ICT Innovation Track - Huawei - 2024
- Second Prize - Blockchain For Good Malaysia Inter-Varsity Hackathon - UTM-AlgoHub - 2023
- Finalist - Payhack 24-Hour Hackathon - PayNet - 2023
- 5th Place & Best Business Idea Award - International Varsity Hackathon - USM - 2023

VOLUNTEERING

Sea Turtle Research Unit (SEATRU) Conservation Field Volunteer

Dates: Jul 2025

- Conducted nocturnal beach patrols, turtle tagging and nest monitoring to improve hatchling survival against natural odds of 1 in 1,000, within a programme engaging 5,700+ individuals from 36 countries.

EPIC Homes House Builder

Dates: Jul 2025

- Completed a 3-day modular home build for an Orang Asli family, contributing to 350+ homes delivered nationwide to address a housing crisis affecting 12,000+ families.
